Camels store
water inside
the humps on
their back.

TRUTH?

or

MYTH?

31

that's a...
MYTH

Contrary to popular belief, the humps on a camel do not contain water! They are actually used to store fat, which is used as a source of nourishment when food is scarce. As camels traverse the desert without food, their humps will shrink in size until they vanish completely.

inference:

- What do you think a camel's humps would look like when it is fully nourished?
- Why do a camel's humps get smaller when food is scarce?

compare and contrast:

- desert/jungle

attributes:

- a camel lives in the desert - name 3 more animals that live in the desert

synonym: vanish

antonym: vanish, shrink
